

CLAIM AMENDMENTS -

1. (Currently Amended) A unit for transferring groups of rolls to be wrapped within a film, from an intermediate station to subsequent stations, ~~including~~ comprising means for feeding said intermediate station with groups of rolls, partially wrapped with a film ~~so~~ such that longitudinal edges of the film are overlapped, said intermediate station ~~being defined by~~ comprising:

first horizontal means supporting an ensemble formed by the group and the film;

second horizontal means situated above said first supporting means for constraining said ensemble supported by said first supporting means;

third vertical means, for constraining said ensemble laterally;

an outlet side, for allowing said ensemble to exit said intermediate station;

said unit further ~~including~~ comprising:

pusher means operated when said ensemble is located in said intermediate station, so as to cause said third means to strike laterally said ensemble and to convey it said ensemble toward the outlet of said intermediate station;

at least one first conveyor;

one horizontal active run of said first conveyor, coplanar with said first supporting means and situated after said outlet of said intermediate station, said horizontal active run being operated in time relation with said pusher means and with a speed correlated with ~~the~~ a speed of said pusher means;

said active run ~~being aimed at~~ receiving said ensemble, pushed out from said intermediate station by said pusher means, and sending said ensemble toward subsequent stations;

a second conveyor, equipped with at least one lower run, situated above and parallel to said active run, operated in a direction and with a speed correlated with the direction and the speed of said active run, said lower run constraining an upper part of said ensemble to send said ensemble, in cooperation with said active run, toward said intermediate stations;
and, at least one third and one fourth conveyor, with said third and fourth conveyors having related facing inner runs, said vertical facing inner runs being operated synchronously in a direction coinciding with the direction of said active run and with a speed correlated with the speed of said active run, said facing inner runs constraining opposite heads of said ensemble while sending said ensemble toward said intermediate stations, in cooperation with said active run.

2. (Original) A unit as claimed in claim 1, wherein said active run is operated stepwise, with a step extending in accordance with the dimension of said ensemble measured in the direction of forward movement of said active run.

3. (Original) A unit as claimed in claim 1, wherein said active run is operated continuously.

4. (Original) A unit as claimed in claim 1, wherein said second stop means extend along said active run, covering at least an initial part thereof.

5. (Cancelled).

6. (Currently Amended) A unit as claimed in claim 5, 1, wherein the speed of said active run and the speed of the lower run are identical.

7. (Currently Amended) A unit as claimed in claim 5 1, further including means for adjusting a mutual distance between said active run and said lower run in relation to the height of

said ensemble.

8. (Original) A unit as claimed in claim 7, wherein said active run is kept stationary.

9. (Cancelled).

10. (Currently Amended) A unit as claimed in claim 9 1, further including means for adjusting ~~the~~ a mutual distance between said facing inner runs in relation to ~~the~~ a length of said groups of rolls.

11. (Currently Amended) A unit as claimed in claim 9 1, wherein the speed of said facing inner runs is equal to the speed of said active run.

12. (Original) A unit as claimed in claim 1, wherein said active run includes at least one endless belt conveyor.

21 13. (Original) A unit as claimed in claim 1, wherein said active run includes at least two endless belts, arranged side by side.

14. (Original) A unit as claimed in claim 1, wherein said active run includes a plurality of strip-like endless belts arranged side by side.

15. (Currently Amended) A unit as claimed in claim 5 1, wherein said second conveyor includes at least one endless belt.

16. (Currently Amended) A unit as claimed in claim 5 1, wherein said second conveyor includes at least two endless belts, arranged side by side.

17. (Currently Amended) A unit as claimed in claim 5 1, wherein said second conveyor includes a plurality of strip-like endless belts arranged side by side.

18. (Currently Amended) A unit as claimed in claim 9 1, wherein each conveyor of said third and fourth conveyors includes at least one endless belt.

19. (Currently Amended) A unit as claimed in claim 9 1, wherein each conveyor of said third and fourth conveyors includes at least two endless belts, arranged side by side.

20. (Currently Amended) A unit as claimed in claim 9 1, wherein each conveyor of said third and fourth conveyors includes a plurality of strip-like endless belts arranged side by side.
